SUMMARY

MCS candidate at UIUC, graduating December 2026 and available to start February 2027. Backend engineer with 2+ years across C#/.NET delivery at Foxtons and distributed systems work in a UIUC research lab. Built hantiile.com, a full marketplace, end to end in Java/Spring Boot. Strong SQL Server and PostgreSQL schema design and query tuning.

EDUCATION

University of Illinois Urbana-Champaign, Champaign, IL (4.0 GPA) Expected Dec 2026

Master of Computer Science

University College London, London, UK Sep 2018

Master of Engineering, Chemical Engineering (integrated undergraduate degree)

TECHNICAL SKILLS

Languages: Java, C#, Python, SQL, JavaScript, TypeScript
Frameworks and Services: Spring Boot, ASP.NET, Entity Framework, React, REST APIs, JSON, Microservices
Data, Cloud and Testing: PostgreSQL, SQL Server, Redis, RabbitMQ, AWS, Azure, Kubernetes, Docker, GitHub Actions, CI/CD, Git, JUnit, Mockito, Testcontainers, TDD
AI-Assisted Development: Claude Code, GitHub Copilot, AI-generated test and documentation review
Certifications: AWS Certified Cloud Practitioner

EXPERIENCE

University of Illinois Urbana-Champaign, Chemical Imaging and Structures Lab, Urbana, IL Jan 2026 to Pres.

Graduate Software Engineer | C#, Python, TypeScript, React, Docker, Kubernetes, Redis

- Architected a distributed streaming viewer for QCL microscopy that decouples acquisition from visualization, increasing tile throughput and letting acquisition, processing, and viewing scale independently
- Engineered a multi-resolution tile pyramid with Redis caching, cutting whole-slide load time from 5 minutes to 30 seconds on 1000+ tile datasets by serving each zoom level from precomputed tiles
- Deployed microservices on Kubernetes (EKS) with horizontal autoscaling, scaling linearly from 1 to 5 instruments, and built a React and OpenSeadragon viewer for remote pathology

Foxtons, London, UK Jul 2022 to Jun 2024

Software and Development Support Engineer | C#, .NET, ASP.NET MVC, SQL Server

- Built and supported legacy enterprise C#/.NET and ASP.NET MVC applications with REST APIs and SQL Server backends, from marketplace CRM systems to financial, HR, and property valuation tools used across the business
- Optimized SQL Server queries and stored procedures, reduced redundant packages during modernization, and led the source-control migration from TFS to GitHub to strengthen CI/CD
- Delivered production support through log analysis, root-cause investigation, and fix delivery, handling 100+ weekly technical inquiries in an Agile Scrum environment with peer code review

PROJECTS

Hantiile, **Marketplace Platform (hantiile.com)** Jun 2024 to Pres.

Founder & Lead Engineer | Java, Spring Boot, PostgreSQL, RabbitMQ, Redis, React, Docker, Kubernetes

- Built a real estate platform with two surfaces, a client marketplace (hantiile.com) and an agency CRM (agent.hantiile.com), for Gulf and East African markets in Arabic (RTL), English, and Somali
- Designed 13 Spring Boot microservices behind an API gateway that enforces per-surface JWT audiences and Redis rate limiting, each service owning its domain and Flyway migrations on PostgreSQL
- Connected services through RabbitMQ events published via a transactional outbox, with dead-letter queues and capped retries, so cross-service updates never depend on direct writes
- Built the React and TypeScript web apps (Vite, TanStack Query, Vitest, Playwright) and started native Android (Kotlin, Jetpack Compose) and iOS (SwiftUI) clients
- Tested against real PostgreSQL with JUnit 5 and Testcontainers (97% coverage gate on the identity service); GitHub Actions builds Jib images to GHCR and rolls them onto a Docker Compose host behind Caddy
- Used Claude Code and GitHub Copilot to draft tests, refactor services, and generate API docs; validated AI output through code review, CI gates, and static analysis before merge

Technical Blog (blog.iabdinur.dev)

- Weekly writing on UIUC MCS course reviews, software engineering, and system design, explaining trade-offs for a non-specialist audience
